8510B -1, -2, -5 Piezoresistive pressure transducer

Features

- 1 to 5 psi, 300 mV full scale
- Rugged, miniature

Description

The Endevco model 8510B is a rugged, miniature, high sensitivity piezoresistive pressure transducer. It has a 10-32 mounting thread, 0.15 inch (3.8 mm) face diameter and is available in ranges from 1 psi to 2000 psi. Low pressure ranges are shown on this sheet. Its high sensitivity combined with high resonance makes it ideal for measuring dynamic pressure.

Endevco pressure transducers feature a fouractive arm strain gage bridge diffused into a unique sculptured silicon diaphragm for maximum sensitivity and wideband frequency response. Self-contained hybrid temperature compensation provides stable performance over the temperature range of 0°F to 200°F (-18°C to +93°C). Endevco transducers also feature excellent linearity (even to 3X range), high shock resistance, and negligible sensitivity to temperature transients.

The model 8510B is designed for a wide variety of aerospace, automotive and industrial measurements which require a combination of small size, high sensitivity, and wideband frequency response. Its vent tube may be connected to a standard reference manifold or used for differential pressure measurements.

Endevco model 136 three-channel system, model 4428A or 4430A signal conditioner, or 0ASIS 2000 computer-controlled system are recommended as signal conditioner and power supply.

Specifications

The following performance specifications conform to ISA-RP-37.2 (1964) and are typical values, referenced at +75°F (+24°C), 100 Hz and 10 Vdc unless otherwise noted. Calibration data, traceable to National Institute of Standards and Technology (NIST), is supplied.

Dynamic characteristics	Units	8510B-1	-2	-5
Range [1]	psig	0-1	0-2	0-5
Positive sensitivity [2]	mV/psi	200 ±50	100 +55/-25	60 ±20
Combined: non-linearity, non-repeatability,				
pressure hysteresis [3]	% FS0 RSS max	1.50	1.50	0.75
Non-linearity, independent	% FS0 typ	1.0	1.0	0.5
Non-repeatability	% FS0 typ	0.2	0.2	0.1
Pressure hysteresis	% FS0 typ	0.2	0.2	0.1
Zero measurand output [4]	mV max	±10	±10	±10
Zero shift after 3X range	±% 3X FSO max	0.2	0.2	0.2
Thermal zero shift				
from 0° F to +200 $^{\circ}$ F (-18 $^{\circ}$ C to +93 $^{\circ}$ C)	±% FS0 max	3	3	3
Thermal sensitivity shift				
from 0° F and +200 $^{\circ}$ F (-18 $^{\circ}$ C to +93 $^{\circ}$ C)	±% max	4	4	4
Resonance frequency	Hz	55 000	70 000	85 000
Non-linearity at 3X range	% 3X FS0	2.5	2.5	2.0
Thermal transient response per	psi/°F	0.003	0.003	0.003
ISA-S37.10, para. 6.7, procedure I	psi/°C	0.005	0.005	0.005
Photoflash response [5]	Equiv. psi	0.2	0.3	0.7
Warm-up time [6]	ms	1	1	1
Acceleration sensitivity	Equiv. psi/g	0.0002	0.0002	0.0002
Burst pressure (diaphragm/reference side) [7]	psi min	25/25	40/40	100/100

 Supply voltage [8]
 10.0 Vdc recommended, 18.0 Vdc maximum

 Electrical configuration
 Active four-arm piezoresistive bridge

Polarity Positive output for increasing pressure into (+) port (end with screen on it)

 Input
 2000 ±800 ohms

 Output
 1600 ±500 ohms

Isolation100 megohms minimum at 50 volts; leads to case, leads to shield, shield to caseNoise5 microvolts rms typical, dc to 50 000 Hz; 50 microvolts rms maximum, dc to 50 000 Hz

Mechanical

Case material Stainless steel (17-4 PH CRES)

Cable, integral 4 conductor No. 32 AWG Teflon® insulated leads, braided shield, silicone jacket, 30 ±3 in (760 ±76 mm)

Dead volume (+) port 0.0003 cubic inches (0.005 cc)

Mounting torque $10-32 \text{ UNF-2A threaded case } 0.438 \text{ inch } \{11.12 \text{ mm}\} \log / 15 \pm 5 \text{ lbf-in } \{1.7 \pm 0.6 \text{ Nm}\}$

Weight 2.3 grams (cable weighs 9 grams/meter)

Environmental characteristics

Media [9] [10]

Temperature [9] [10] $-65^{\circ}\text{F to } +250^{\circ}\text{F } [-54^{\circ}\text{C to } +121^{\circ}\text{C}]$

 Vibration
 1000 g pk

 Acceleration
 1000 g

Shock 20 000 g, 100 microsecond haversine pulse

Humidity Isolation resistance greater than 100 megohms at 50 volts when tested per MIL-STD-202E,

method 103B, test condition B

8510B -1, -2, -5 Piezoresistive pressure transducer

Endevco

Calibration data supplied

Data supplied for all parameters in Certified Performance section. Optional calibrations available for all parameters in Typical Performance section.

Included accessories

EHR93 O-ring, Viton 3027A-120 Cable assembly

Optional accessories

EHR96 O-ring, fluorosilicone 24328 4 conductor shielded cable

Notes:

- Pressure ranges can be considered bidirectional, e.g. an 8510B-5 can be used to measure + or -5 psig. Sensitivity in the positive direction is typically within 1% of sensitivity in the negative direction. Sensitivity calibration provided with each unit is for positive direction.
- 2. 1 psi = 6.895 kPa = 0.069 bar.
- 3. FSO (Full Scale Output) is defined as transducer output change from 0 psig to + full scale pressure. Calibration provided is for positive pressure. Sensitivity to negative pressures is typically within 1% of positive pressure sensitivity.
- 4. Zero Measurand Output (ZMO) is the transducer output with 0 psig applied.
- Per ISA-S37.10, Para. 6.7, Proc. I. The metal screen partially shields the silicon diaphragm from incident radiation. Accordingly, light incident at acute angles to the screen generally increases the error by a factor of 2 or 3.
- Warm-up time is defined as elapsed time from excitation voltage "turn on" until the transducer output is within ±1% of reading accuracy.
- Reference side pressure may be 300 psi on all ranges if differential limits (psid) are not exceeded.
- 8. Use of excitation voltages other than 10.0 Vdc requires manufacture and calibration at that voltage since thermal errors increase with high excitation voltages.
- 9. Internal seals are epoxy and are compatible with clean dry gas media. Media in (+) measurand port is exposed to CRES, nickel-iron alloy, Parylene C, epoxy, and the Viton® O-ring media in (-) measurand port is exposed to the above and RTV silicone coating. For use in water or corrosive media, contact the factory for modifications and installation precautions which may be taken to extend service life.
- 10. O-Ring, Endevco part number EHR93 Viton® is supplied unless otherwise specified on Purchase Order. Part number EHR96 Parker material L677-70 for leak tight operation below 0°F (-18°C) is available on special order.
- 11. Maintain high levels of precision and accuracy using Endevco's factory calibration services. Call Endevco's inside sales force at 800-982-6732 for recommended intervals, pricing and turnaround time for these services as well as for quotations on our standard products.

NOTE: Tighter specifications are available on special order.
